சැය ¢aaයි இரண்டு மணித்தியாலம் **Two hours**

Instructions:

- * Answer all questions.
- * Write your Index Number in the space provided in the answer sheet.
- * Instructions are given on the back of the answer sheet. Follow them carefully.
- * In each of the questions from 1 to 50, pick one of the alternatives from (1), (2), (3), (4), (5) which is correct or most appropriate and mark your response on the answer sheet with a cross (x) on the number of the correct option in accordance with the instructions given on the back of the answer sheet.
- 1. The first organisms formed on earth are considered to be
 - (1) heterotrophic, anaerobic eukaryotes.
 - (2) heterotrophic, aerobic prokaryotes.
 - (3) autotrophic, anaerobic eukaryotes.
 - (4) heterotrophic, anaerobic prokaryotes.
 - (5) autotrophic, aerobic prokaryotes.
- 2. Proteins
 - (1) form the secondary structure due to disulphide bonds.
 - (2) are made up of 26 different amino acids.
 - (3) are composed of C, H, O, N, S and P.
 - (4) would not be denatured by detergents.
 - (5) contribute to transport of materials.
- 3. Steps involved in observing an onion peel mounted on a glass slide and placed on the stage of a compound light microscope are as follows.
 - A Adjusting the mirror
 - B Use of fine focussing knob
 - C Use of coarse focussing knob

The correct sequence of above steps are

(1) A, B and C.

(2) A, C and B.

(3) B, A and C.

(4) C, A and B.

- (5) C, B and A.
- 4. Some features of cells are as follows.
 - A Presence of plasma membrane
 - B Presence of 70S ribosomes
 - C Occurrence of mitosis
 - D Presence of subcellular components suspended in cytosol

Which of the above features are common to prokaryotic and eukaryotic cells?

(1) A and B only.

(2) B and C only.

(3) B and D only.

- (4) A, B and C only.
- (5) A, B and D only.

- 5. Which of the following statements regarding eukaryotic cell cycle is correct?
 - (1) Crossing over takes place in metaphase of meiosis I.
 - (2) Formation of chromatin occurs in G₁ phase.
 - (3) DNA replication occurs in G, phase.
 - (4) Nuclear envelope reforms during cytokinesis.
 - (5) Formation of mitotic spindle begins in prophase.

6. ATP

- (1) is a nucleoside containing pentose sugar, adenine and phosphate groups.
- (2) can be produced by oxidative phosphorylation using solar energy.
- (3) hydrolyses to ADP releasing 30.5 kJ/mol of energy.
- (4) is formed in pyruvate oxidation through substrate level phosphorylation.
- (5) contains deoxyribose.
- 7. Which of the following is a characteristic of enzymes?

More Past Papers at

tamilguru.lk

- (1) They do not alter the nature of end products.
- (2) They increase the activation energy of a reaction.
- (3) They are not substrate specific.
- (4) A small amount of enzyme is used up during the reaction.
- (5) Any part of the enzyme molecule can catalyze a reaction.
- 8. Some statements regarding biochemical evolution are given below.
 - P Small organic molecules such as amino acids and nitrogenous bases were first formed in early oceans.
 - O Small organic molecules polymerized to form organic macromolecules.
 - R Protocells contained nucleic acids enclosed in a membrane.

Which of the above statements is/are correct?

(1) P only.

(2) Q only.

(3) P and Q only.

(4) Q and R only.

- (5) P, O and R.
- 9. Some features of organisms are given below.

Cellular Organization	Peptidoglycan	RNA Polymerase	Response to Streptomycin
A – Prokaryotic	P - Present	R – One kind	X - Growth inhibited.
B – Eukaryotic	Q - Absent	S – Several kinds	Y - Growth not inhibited.

Select the response that indicates the correct combination of above features for each of the organisms given below.

- (1) Nostoc A, P, S, X
- (2) Thermococcus A, P, R, Y
- (3) Euglena B, P, S, X
- (4) *Mucor* B, Q, S, Y
- (5) Planaria B, Q, R, Y
- 10. Some structures seen among animals are as follows.

Protonephridia, mantle and nematocysts

Organisms showing each of the above structures in correct sequence are

- (1) Obelia, hook worm and Fasciola. (2) Planaria, slug and jellyfish.
- (3) *Taenia*, pin worm and *Obelia*.
- (4) Fasciola, earthworm and Hydra.
- (5) Sea cucumber, snail and Obelia.
- 11. Spike mosses can be considered to be more similar to seed plants than club mosses do due to the presence of
 - (1) stems.

- (2) leaves.
- (3) heterospory.

(4) strobili.

(5) dominant sporophyte.

AL/2	020/09/E-I(NEW) - 3 - 4749
12.	Several features seen among some chordates are as follows. A - Keratinized structures B - Internal fertilization C - Parthenogenesis D - Marine life Which of the above features can be seen in the organisms of classes Reptilia, Aves and Mammalia? (1) A and B only. (2) A and C only. (3) B and D only. (4) A, B and C only. (5) A, B and D only.
13.	Collenchyma cells differ from parenchyma cells because collenchyma cells (1) are non-living when mature. (2) have a large central vacuole. (3) have unevenly thickened cell walls. (4) are thickened with lignin. (5) are present in the vascular tissues of plants.
14.	Shoot apical meristem (1) increases height and diameter of stem. (2) produces cells inwards and outwards. (3) is composed of parenchyma cells. (4) is composed of undiffentiated cells. (5) contributes to primary and secondary growth of stem.
15.	Dissolving of solutes in water (1) increases water potential and solute potential. (2) decreases water potential and solute potential. (3) decreases water potential and increases solute potential. (4) increases water potential and decreases solute potential. (5) affects water potential and solute potential independent of each other.
16.	Osmosis (1) occurs due to diffusion of water molecules through a permeable membrane. (2) occurs from a low water potential to a high water potential. (3) is an active process. (4) is the mechanism by which water enters root hairs from soil. (5) reduces pressure in the sieve tube at the source.
17.	Chlorosis in older leaves may be caused due to deficiency of which of the following elements? (1) Mg and S (2) N and P (3) Cl and Fe (4) Mn and Zn (5) Mo and Ni
18.	Seed of a fruit is developed from (1) egg cell. (2) central cell. (3) embryo sac. (4) ovule. (5) ovary.
19.	Some plant hormones are given below A - Abscisic acid B - Cytokinins C - Ethylene D - Gibberellins Of the above hormones, leaf senescence is promoted by (1) A and B only. (2) A and C only. (3) B and C only. (4) C and D only. (5) A, B and C only.

(2) Lycopodium and Selaginella.

(4) Lycopodium and Gnetum.

20. Examples for plants showing homospory are (1) Pogonatum and Nephrolepis.

(3) Selaginella and Cycas.

(5) Nephrolepis and Pinus.

21.	of bones in man in correct sequence are (1) Mg, Fe and P. (2) P, K and Cl. (3) K, Na and I. (4) Na, K and Cl. (5) Cl, Ca and P.
22.	This question is based on the following. A - Movement of lymph; contraction of cardiac muscle B - Exchange of gases in capillaries; active transport C - Clotting of blood; formation of thrombin D - Transport of CO ₂ in blood; participation of red blood cells. In which of the above pairs, does the second contribute to the first? (1) A and B (2) A and C (3) B and C (4) B and D (5) C and D
23.	Four respiratory volumes of a resting person are as follows. Inspiratory reserve volume = 2500 ml Expiratory reserve volume = 1450 ml Residual volume = 1100 ml Inspiratory capacity, functional residual capacity and vital capacity of this person in correct sequence are (1) 2950 ml, 2550 ml and 4400 ml. (2) 1900 ml, 1550 ml and 5050 ml. (3) 2950 ml, 1900 ml and 4400 ml. (4) 2550 ml, 3950 ml and 5050 ml. (5) 2950 ml, 2550 ml and 5500 ml.
24.	Which of the following excretory structures of animals opens into digestive tract? (1) Green glands (2) Salt glands (3) Flame cells (4) Malpighian tubles (5) Nephridia
25.	Select the response that correctly indicates the part of the human brain and its function. (1) Thalamus — regulation of appetite (2) Hypothalamus — maintenance of posture (3) Mid brain — coordination of visual reflexes (4) Pons Varolii — regulation of sleep and awake cycles (5) Cerebellum — initiation of fight or flight response
26.	In the retina of the human eye, the cell layers are arranged from the choroid to vitreous humour respectively as (1) epithelial layer, bipolar cells, ganglion cells and photoreceptors. (2) photoreceptors, epithelial layer, ganglion cells and bipolar cells. (3) epithelial layer, bipolar cells, photoreceptors and ganglion cells. (4) ganglion cells, bipolar cells, photoreceptors and epithelial layer. (5) epithelial layer, photoreceptors, bipolar cells and ganglion cells.
27.	Stimulation of the sympathetic division of the autonomic nervous system in man (1) decreases the rate of heart beat. (2) promotes digestion. (3) constricts pupil of the eye. (4) stimulates urination. (5) promotes ejaculation of semen.
28.	The hormone that has a tropic effect and a non-tropic effect is (1) TSH. (2) ACTH. (3) prolactin. (4) GH. (5) FSH.
29.	 Which of the following statements regarding asexual reproduction of animals is correct? (1) It relies entirely on meiotic division. (2) It may produce offspring with varied genotypes. (3) It enhances the evolution of species in changing environments. (4) It allows rapid multiplication of individuals from a single parent.

(5) New organisms can be developed from a sperm without fertilization.

- 30. In the human skull,
 - (1) vomer contributes to form the cranium.
 - (2) ethmoid and sphenoid bones are facial bones.
 - (3) zygomatic and parietal bones contribute to form the zygomatic arch.
 - (4) mastoid process of mandible articulates with temporal bone.
 - (5) maxillary and frontal bones contain sinuses.
- 31. Hybrid vigour is
 - (1) increased by breeding among genetically similar individuals.
 - (2) higher in parents than in their F, generation.
 - (3) achieved by increasing heterozygocity.
 - (4) maintained by breeding among hybrids.
 - (5) a result of interspecific hybridization.

More Past Papers at

tamilguru.lk

- 32. A function of topoisomerase is
 - (1) sealing the gaps of DNA strands.
 - (2) unwinding the double helix of DNA.
 - (3) stabilizing separated DNA strands.
 - (4) relaxing the strain of overtwisted DNA strands.
 - (5) breaking the hydrogen bonds between DNA strands.
- 33. Translation of eukaryotes differs from that of prokaryotes because it
 - (1) does not start before transcription is terminated.
 - (2) occurs in the nucleus.
 - (3) uses UAG, UAA or UGA as stop signals.
 - (4) does not form polysomes.
 - (5) does not start at AUG codon.
- **34.** Which of the following responses indicates the biomes in increasing order of average annual rainfall/precipitation?
 - (1) Arctic tundra, temperate grasslands, temperate broad leaf forests
 - (2) Temperate grasslands, savannas, tropical rain forests
 - (3) Deserts, Alpine tundra, northern coniferous forests
 - (4) Arctic tundra, chaparrals, savannas
 - (5) Tropical dry forests, chaparrals, Alpine tundra
- **35.** Select the response with three threatened organisms.
 - (1) Bengal tiger, dodo, Sri Lankan elephant
 - (2) Black ruby barb, giant tortoise, woolly mammoth
 - (3) Tilapia, water hyacinth, blue magpie
 - (4) Giant African land snail, giant panda, Indian fly catcher
 - (5) Maha madu, Wesak orchid, dusky-striped jungle squirrel
- 36. Which of the following international agreements may contribute to reduce global warming?
 - A Kyoto protocol
 - B Basel convention
 - C Montreal protocol
 - D Cartagena protocol
 - (1) A only.

- (2) A and B only.
- (3) A and C only.

- (4) A, B and C only.
- (5) A, B and D only.

- 37. Which of the following statements regarding microorganisms is correct?
 - (1) Almost all mycoplasmas are parasites of animals and plants.
 - (2) Fungi are chemoheterotrophs which show saprophytic or parasitic modes of nutrition.
 - (3) Purple non-sulphur bacteria utilize light as the source of energy and CO₂ as the source of carbon.
 - (4) Streptococcus bacteria divide in multiple planes.
 - (5) In cyanobacteria, nitrogen fixation is catalyzed by nitrogenase enzyme present in akinetes.
- 38. Some bacterial pathogens
 - (1) produce phospholipase which contributes to invasiveness.
 - (2) produce endotoxins which are thermolabile lipopolysaccharides.
 - (3) use the capsule and pili to enter host tissue.
 - (4) obtain nutrients from host cells without altering the metabolism of the host.
 - (5) produce lecithinase that breaks down the cementing substance between cells.
- 39. Which of the following statements regarding the roles of microorganisms is correct?
 - (1) When organic matter is mineralized by bacteria and fungi, oxygen, water and CO₂ are released.
 - (2) Methanotrophic microorganisms produce methane from ocean sediments.
 - (3) Pseudomonas sp. causes denitrification when oxygen is limited in soil.
 - (4) Rhizobia are free living nitrogen fixing bacteria in soil.
 - (5) All rhizosphere fungi are beneficial to plants.
- 40. Select the response which correctly indicates the disease and its causative microorganism.
 - (1) Botulism Staphylococcus sp.
 - (2) Tetanus Clostridium sp.
 - (3) Cholera Shigella sp.
 - (4) Dysentry Salmonella sp.
 - (5) Typhoid Vibrio sp.
- For each of the questions 41 to 50, one or more of the responses is/are correct. Decide which response/responses is/are correct and then select the correct number.

If only (A), (B) and (D) are correct(1	i)
If only (A), (C) and (D) are correct(2	2)
If only (A) and (B) are correct	3)
If only (C) and (D) are correct(4	1)
If any other response or combination of responses is correct (5	5)

Directions summarised					
(1)	(2)	(3)	(4)	(5)	
(A), (B), (D) correct.	(A), (C), (D) correct.	(A), (B) correct.	(C), (D) correct.	Any other response or combination of responses correct.	

- 41. Select the features that can be seen in the tissues of the respiratory system of man.
 - (A) Single layer of plate like cells
 - (B) Single layer of cells of different heights
 - (C) Single layer of dice shaped cells
 - (D) Matrix with chondroitin sulphate
 - (E) Single layer of brick shaped cells
- 42. Three substances that the ingested food get encountered within the buccal cavity, stomach and small intestine of man in correct sequence are
 - (A) lysozymes, pepsin and aminopeptidase.
 - (B) immunoglobulins, HCl and chymotrypsin.
 - (C) salivary amylase, dipeptidase and lipase.
 - (D) mucus, pepsin and bile.
 - (E) lysozymes, carboxypeptidase and amylase.

- 43. Some features of circulatory systems and examples for animals showing each of those features are given below. Select the correct "feature-example" combination/combinations.
 - (A) No distinction between circulatory fluid and interstitial fluid Centipede
 - (B) Presence of pulmonary veins Spider
 - (C) Back flow of circulatory fluid into the heart via pores in the heart Cockroach
 - (D) Two chambered heart Ray
 - (E) Absence of blood capillaries Carp

44. Antibodies

- (A) are proteins secreted by plasma cells.
- (B) are soluble forms of B lymphocyte antigen receptors.
- (C) contain epitopes that initiate immune responses.
- (D) inactivate pathogens in body fluids.
- (E) kill body cells infected with pathogens.
- 45. Which of the following cells in the testes of man are diploid?
 - (A) Primary spermatocytes
- (B) Secondary spermatocytes (C) Spermatogonia

(D) Leydig cells

- (E) Spermatids
- 46. In the human vertebral column,
 - (A) 24 bones are linearly arranged.
 - (B) cervical curvature develops at about 7-8 months after birth.
 - (C) thoracic region is formed by 12 vertebrae.
 - (D) cervical vertebrae contain foramen for vertebral arteries.
 - (E) lumbar vertebrae contain bifid spinous processes.
- 47. Which of the following statements regarding the results of Mendel's experiments is/are correct?
 - (A) F₂ generation of a monohybrid cross shows 3:1 phenotypic ratio.
 - (B) Heritable factors of a dihybrid cross are located close to each other on the same chromosome.
 - (C) Each heritable character is determined by two heritable factors.
 - (D) Heritable factors of a dihybrid cross are located on two non-homologous chromosomes.
 - (E) F₂ generation of a dihybrid cross shows 9:3:3:1 genotypic ratio.
- 48. Substitution of a single nucleotide in a DNA sequence may result in
 - (A) silent mutation.

- (B) shift in the reading frame.
- (C) formation of a shorter peptide.
 - (D) cancer.
- (E) shortening of gene.
- 49. This question is based on the food web given below.

In the above food web, the organisms that can be considered as in the same trophic level are

- (A) eagle and snake.
- (B) leopard and fox.
- (C) toad and mouse.

(D) toad and eagle.

- (E) grasshopper and leopard.
- 50. Which of the following statements regarding drinking water treatment process is/are correct?
 - (A) Alum is added to remove suspended matter and microorganisms.
 - (B) Ozone is used to kill microorganisms.
 - (C) During filtration stage, microorganisms are removed by absorption into sand particles.
 - (D) Trickling filter method is used to filter microorganisms.
 - (E) During the primary treatment, about 90% of organic matter is removed.

පැය තුනයි முன்று மணித்தியாலம் Three hours

මිනිත්තු 10 යි අමතර කියවීම් කාලය 10 நிமிடங்கள் மேலதிக வாசிப்பு நேரம் Additional Reading Time 10 minutes

Use additional reading time to go through the question paper, select the questions you will answer and decide which of them you will prioritise.

Index No.	:	

Instructions:

- * This question paper consists of 10 questions in 9 pages.
- * This question paper comprises Part A and Part B. The time allotted for both parts is three hours.

PART A — Structured Essay (Pages 2-8)

- Answer all four questions on this paper itself.
- Write your answers in the space provided for each question. Note that the space provided is sufficient for your answers and extensive answers are not expected.

PART B - Essay (Page 9)

- * Answer four questions only. Use the papers supplied for this purpose. At the end of the time allotted for this paper, before handing over to the supervisor tie the two parts together so that Part A is on the top of Part B.
- You are permitted to remove only Part B of the question paper from the examination hall.

Part A - Structured Essay

Answer all questions on this paper itself. (Each question carries 100 marks.)

Do not write in this column

1. (A)	(i)	One of the characteristic features of living organisms is irritability. What is known as irritability?		
	(ii)	What is the monomer of each of the following?		
		Pectin:		
		Hemicellulose:		
	(iii)	State two common functions of NAD+, NADP+ and FAD.		
	(iv)	Name the structure that helps in cytoplasmic streaming and movement of chromosomes, and state its structural components.		
		Structure:		
		Structural components :		
	(v)	State the location of the secondary cell wall of a plant cell and name a substance present in it other than cellulose.		
		Location:		
		Substance:		
(B)	(i)	What are the three events that contribute to genetic variations during meiosis?		
	(ii)	Name the type of photosynthetic pigment that prevents the formation of reactive oxidative molecules harmful to plant cells.		
	(:::X			
	(111)	What is known as the action spectrum of photosynthesis?		
	(iv)	Name the two types of cells in which CO_2 fixation occurs in C4 plants and state the CO_2 acceptor and CO_2 fixing enzyme present in each of them.		
		Type of cell CO ₂ acceptor CO ₂ fixing enzyme		
		(a)		
		(b)		
		How do the two types of cells stated in B(iv) above interconnect tightly with each other?		
(C)	(i)	In which geological eon did the first eukaryotes appear on earth?		

	(ii)	P - Origin of mammals Q - Origin of seed plants R - Dominance of angiosperms		Do not write in this column
		Write the above events in chronological order using the releva	int letters.	
	(iii)	State three features of free living forms of phylum Platyhelm seen in parasitic forms.	ninthes that cannot be	
	(iv)	y) State where the male and female gametophytes are present in	seed plants.	
		Male gametophyte:		
		Female gametophyte:		
	(v)	c) Complete the following dichotomous key to distinguish the pr	otists given below.	
		Euglena, Paramecium, Amoeba, Ulva, Sargassum, Diato	oms	
		(1) Cell wall present		
		Cell wall absent		
		(2) Multicellular		
		Unicellular		
		(3) Gas filled floats present		
		Gas filled floats absent		
		(4) Pellicle present		
		Pellicle absent		
		(5) Cilia present		100
		Cilia absent		100
2. (A)	(i)	i) State the three processes that contribute to growth of plants.		
	(;;)	i) State and function of each of the following plant tiggues		
	(11)	i) State one function of each of the following plant tissues.		
		Vascular cambium :		
	<i>(</i> ***)	Cork cambium:		
	(111)	i) Through which structure, each of the following activities take		
		Gaseous exchange in woody stems:		
		Guttation:		
	(iv)	State in correct sequence what happens in guard cells from the of K^+ ions until the opening of stomata.	stage of accumulation	
				1

- 3 -

	(v)	How do temperatures below a critical leve	in this
			colum
(B)	(i)	A sketch of the life cycle of a land plant	is given below.
, ,	()	Name the processes denoted by A, B and	C and the structures denoted by D and E.
		GametophyteA	A:
			B:
		E Gametes	C :
		B	D :
		Sporophyte D	E:
	(ii)	State the following types of symbiosis.	
		Beneficial to both organisms:	
		Beneficial to one organism and no effect of	on the other:
	(iii)	(a) Calculate the body mass index of a per	son who is 153 cm tall and weighs 50 kg.
	(iv)	(b) According to the World Health Organiz this person should have in order to co (Give your answer in kg to the first of the Name a fat soluble vitamin that acts as a	onsider him as non-malnourished? decimal)
	` ′		
	(v)	Name two hormones that are secreted by the antagonistic to each other.	e digestive tract of man and have functions
(C)	(i)	(a) State a common function of epithelial	
		(b) State three structural features of dense co it from other connective tissues when o	nnective tissue that can be used to distinguish
	(ii)	State the functions of the SA node and AV	node of the human heart.
	` /	SA node:	
		AV node:	

		(iii)	Draw the normal ECG tracing of a healthy person and label its waves.	Do not write in this column
		(iv)	State what are represented by the first and last waves of the ECG tracing.	
			First wave:	
			Last wave:	
		(v)	Considering a haemoglobin molecule as 'Hb', write the equation for the chemical reaction that occurs only in the red blood cells of lung capillaries.	100
3.	(A)	(i)	Briefly state what interferons are?	
		(ii)	Name two capillary networks that are associated with the human nephron other than the glomerulus.	
		(iii)	What is dialysis carried out for kidney patients?	
		(iv)	State a similarity between nervous coordination and hormonal coordination.	
		(v)	Name two phyla that include animals with brain, ventral nerve cord and segmented ganglia.	
		(1)	Traine two priyla that include annuals with events, research	
	(D)	<i>(</i> ')		
	(B)	(1)	(a) What are known as ventricles in the human brain?	
			(b) What are the three parts of the human brain that form the brain stem?	
:				
		(ii)	State two functions of the human spinal cord.	
		(iii)	What is the importance of refractory period of a neuron?	
		(iv)	Name the progressive motor disorder of the nervous system that leads to lack of coordination and control of muscle movements in elderly people.	

	(v)	Bri	efly state what a hormone is?	Do no write in this
				colum
(C)	(i)	(a)	State three functions of Sertoli cells.	
				
		(b)	State the function of acrosome in human sperm.	
		(c)	In which structure of the male reproductive system do the sperm mature?	
		(0)	in which structure of the male reproductive system do the sperm mattic:	
	(ii)	(a)	State two methods that can be used to analyze genetic disorders of the foetus during pregnancy.	
		(b)	Write in correct sequence, the pathway that oxygen poor blood of human foetus gets oxygenated and returns to the foetus.	
	(iii)		me a phylum which includes animals with an endoskeleton made up of calcium bonate plates.	
	<i>.</i> . \			
	(iv)	(a)	Why doesn't the first pair of ribs move during inspiration of man?	
		(b)	State three structural features of the human vertebral column that help to maintain	
		(0)	upright posture.	
	(v)	(a)	State the function of the arches of the foot of the lower limb of man.	
		(L)	State two leastions where hell and easiest joints are found in the land of the	
		(0)	State two locations where ball and socket joints are found in the human body.	
				100

4.	(A)	(i)	State four desirable features of garden peas for genetic experiments.	Do not write in this
			C	colum
		/!! \	() What is a second of the se	
		(11)	(a) What is known as pleiotropy in genetics?	
			i	
			(h) Circ two examples for plaintment soon in man	
			(b) Give two examples for pleiotropy seen in man.	
		····	NA Liverage	
		(111)	What are known as intergenic DNA and introns?	
			Intergenic DNA:	
			Introns:	
		(iv)	State whether trisomy, monosomy or gene mutation is the reason for each of the following disorders.	
			Disorder Reason	
			Colour blindness	
			Down syndrome	
			Turner syndrome	
		(v)	(a) State why each of the following is used during DNA isolation.	
			Chelating agent:	
			Proteolytic enzymes :	
			Cold ethanol:	
			(b) State two essential features of a cloning vector.	
	(B)	(i)	What is meant by primary production?	
		(ii)	(a) Using the correct letter, indicate the ellipse in the diagram that represents each of the following ecosystems of Sri Lanka.	
			A - Savanna B - Tropical thorn scrubs C - Wet patana D Topical thorn scrubs E 2000	
			A - Savanna B - Tropical thorn scrubs C - Wet patana D - Tropical dry mixed evergreen forests Savanna	
			1000 2000 Altitude (m)	
			(b) Which one of the ecosystems given in (ii)(a) above can be found in the dry zone as well as in the intermediate zone of Sri Lanka?	
l				

	(iii)	Write the common name of an endemic plant found in tropical wet lowland rain forests of Sri Lanka. Write the common name of a plant in Sri Lanka which is facing a very high risk of extinction in the wild.		Do not write in this column
	(iv)			
	(v)	(a)	State the group of organisms that contributes most to reduce the CO_2 content in the atmosphere.	
		(b)	What is the major global environmental issue that affects the organisms stated in $(v)(a)$ above?	
(C)	(i)	(a)	Name an obligate anaerobic bacterial species.	
		(b)	State the importance of akinetes to cyanobacteria.	
	(ii)	(a)	COVID-19 coronavirus is roughly spherical. To which type of morphological form do such spherical viruses belong?	
		(b)	How does a viroid structurally differ from a virus?	
	(iii)		me two diseases for which immunity can be induced using subunit vaccines.	
	(iv)	Nar	me a species of microorganisms used for the production of each of the following stances.	
		Cit	ric acid from sucrose:	
		Inv	ertase :	
		Stre	eptomycin :	
	(v)	(a)	Name two substances that are produced when putrefaction of food occurs due to action of microorganisms.	
		(b)	In routine testing of water samples for consumption, why is the presence of indicator organisms such as coliform bacteria tested instead of the presence of pathogenic microorganisms?	
				$\left(\frac{100}{100}\right)$

Part B - Essay

Instructions:

- * Answer four questions only.

 Give clear labelled diagrams where necessary.

 (Each question carries 150 marks.)
- 5. Describe the process of aerobic respiration that occurs in liver cells of man using glucose as the substrate.
- **6.** (a) Describe the effects of light on plants.
 - (b) Explain how plants are designed to capture maximum amount of light.
- 7. (a) Briefly describe the basic structure of the human eye.
 - (b) Explain the roles of human eye and brain in vision.
- 8. Describe the menstrual cycle of women and its hormonal regulation.
- 9. (a) Briefly describe the applications of microorganisms in agriculture.
 - (b) Explain the applications of Polymerase Chain Reaction (PCR).
- 10. Write short notes on the following.
 - (a) Salt marshes of Sri Lanka
 - (b) Epigenetics
 - (c) Reproduction in Ascomycota

or

Biological control of dengue vector
